

Intranet Portal Development and Deployment

Background

Client is a leading consulting and technology services company, looking towards developing an intranet portal for single point access to multiple internal helpdesks, different organizational level applications and information.

Challenges

The challenges encountered by the Trianz team while executing the project are:

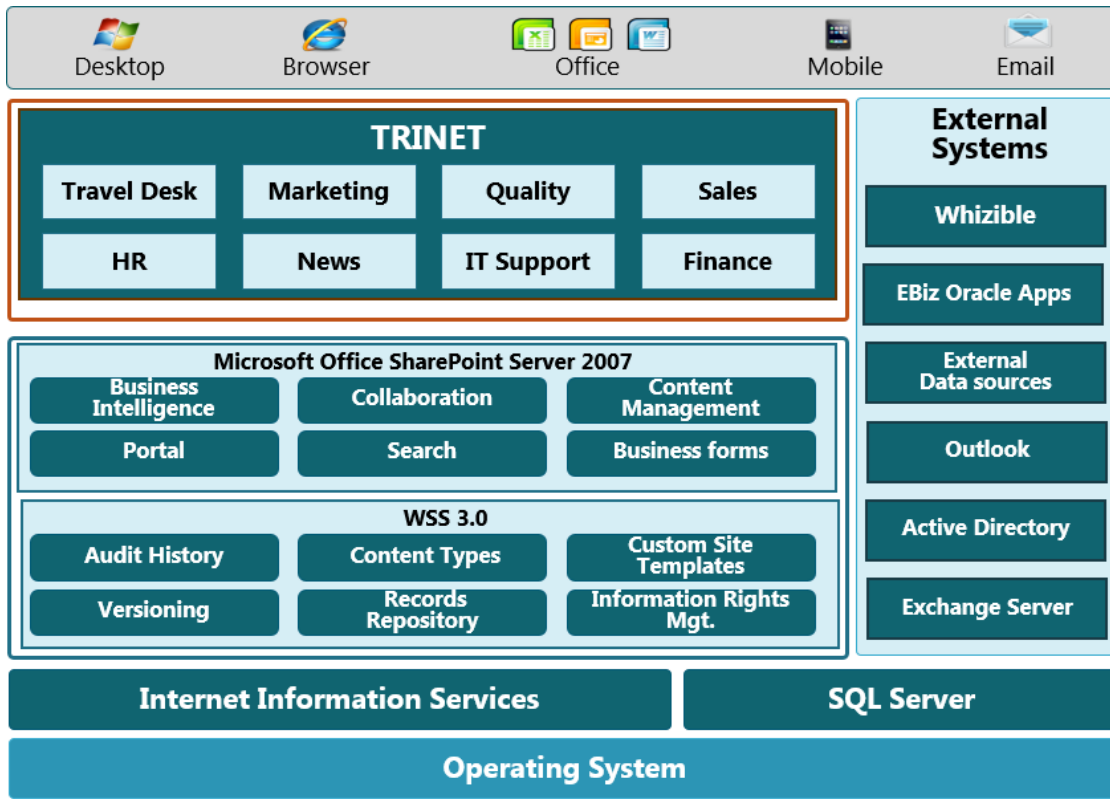

- ▶ Managing all the organizational information/documents at a single place
- ▶ Encouraging employees to practice healthy knowledge sharing
- ▶ Helping employees to access the required data, anywhere, anytime. and a calendar which covers all organizational events
- ▶ Implementing a robust system that is easy to maintain as well as serves the purpose
- ▶ Integrating Active Directory with the existing application is a big challenge

Business Execution Approach

The Trianz team has charted the following execution approach to the client:

- ▶ The intranet portal application designed and developed on a typical 3-tier model with web servers at the front, application servers in the middle and a database server at the back where all the data and configuration is stored.
- ▶ The intranet portal "Trinet" is accessible outside the network (Internet) with appropriate content.

Technology

Supported Tools – SharePoint, Crystal Reports, .Net

Successful Business Results

The execution of the solution proposed by Trianz has achieved the following business results:

- ▶ Common area for news and announcements
- ▶ Single-point access to multiple helpdesks. Single-point access to different organizational level applications
- ▶ Search capability across entire site, including employee search, document search, keyword search
- ▶ Customizable “my site” by employee. Employees can upload their own profiles
- ▶ Quick Links to all other internal applications
- ▶ Complete automation of “Travel Request” maintenance with custom application developed using technologies like .Net, Crystal Reports
