

Enabling Responsive
Execution Models for
Cloud Adoption

Formulate & Operationalize Cloud Strategies for Sustainable Business Advantage

A Shift in the Business World

The emergence of cloud-based technologies is transforming organizational strategies by redefining the business value chain. Organizations across industries are looking to leverage Cloud services to create new business models, accelerate product innovation, and offer differentiated yet personalized services to their customers. While industry leaders are quickly grasping the strategic importance of Cloud technology, they need trusted advisors to guide them through the journey.

The Cloud Advantage

Cloud enables organizations to offer different service models to meet business and IT goals, such as faster product rollout, increased efficiencies, and the ability to cater to growing customer demand. Cloud technologies offer benefits such as elastic capacity, ongoing reliability, consistent performance and advanced security.

Enterprises are increasingly embracing Cloud technologies to offload and manage complex workloads across the organization efficiently. To fully leverage the promise of Cloud opportunities, your organization needs to align the Cloud strategy with an execution strategy that drives measurable, sustainable competitive advantages.

“In the new paradigm, organizations are under pressure to build new strategies and models rapidly to offer deep business insight coupled with intelligent and highly responsive execution, and deliver measurable business results in an uncertain environment.”

Trianz Services

Trianz specializes in combining technology with business acumen, and helping business leaders achieve tangible results aligned to business KPI's. We specialize in building secure, flexible, and scalable cloud-based solutions that reduce costs and significantly improve business productivity and IT operations for our clients. With deep domain expertise, knowledge of business applications, and experience across multiple Cloud platforms, Trianz offers a customized roadmap to Cloud adoption with a focus on execution-driven success.

Cloud Assessment & Strategy

While Cloud computing models offer a plethora of options to drive innovation and operational efficiencies, Cloud adoption can be difficult. Trianz works with business leaders to build a robust Cloud strategy by defining the vision, objectives, and business goals. Trianz helps to define business goals and use proprietary tools and templates to evaluate existing applications, process flows, and security to arrive at an in-depth analysis of the as-is state.

The Trianz Cloud consulting team provides you with strategic direction and a tactical approach to define your Cloud reference architecture, operational model, integration approach for ITSM processes and potential costing model for Cloud services.

Cloud Migration Services

Enterprises that are migrating applications to the Cloud aim to save cost and increase the speed of deployment through a solid strategy for scalability, security, and manageability. To determine the workloads to be migrated to the Cloud, Trianz uses a step-by-step approach to assess your organization's Cloud maturity, application readiness, DC environment, performance, availability, security, regulatory compliance and other dependencies. Trianz then makes recommendations on cultural readiness, change management, training needs and cost-benefit analysis to build a compelling case for Cloud migration.

The migration roadmap defines the target reference architecture, integration, testing, and audit and risk mitigation, with schedule and milestones, including Cloud governance and operations support post implementation.

Application(s) Assessment	Data	Security
<ul style="list-style-type: none"> • Efficiencies gain • Peak loads • End-of-life considerations • Ecosystem • Web-based vs. client • API availability 	<ul style="list-style-type: none"> • Availability • Governance • Integrity • Quality • Exchange 	<ul style="list-style-type: none"> • Architecture • Secure multi-tenant • Authentication & authorization • Regulatory compliance

Analytics on the Cloud

When you want your business to reduce costs and achieve competitive advantage, integration of big data technologies into your enterprise strategy is inevitable. Organizations are now leveraging Cloud infrastructure and tools to assess, plan, and develop big data strategy. Trianz helps your businesses adopt big data and transform into data-centric organizations.

Trianz assesses and recommends a cost-effective approach that aligns with your business and IT goals. The assessment leverages proprietary tools and decision frameworks to estimate TCO and develop a plan to validate the solution in the Cloud. Afterward, Trianz will discuss the proposed solution and formulate next steps. Post validation, Trianz will help you to identify and prioritize the initiatives for developing a plan and building a proof of concept.

Infrastructure on the Cloud

As your organization embraces the Cloud to advance your business, you need a Cloud orchestration platform to seamlessly enable requisitioning, provisioning, and managing services. Standardization and automation of ITSM processes are critical to managing resources and services across on-premise and Cloud environments. Trianz offers support for virtual servers, networks, storage, and an integrated 24/7 service desk. Trianz will enable you to

consolidate automation initiatives, streamline processes and workflows, and institutionalize DevOps in IT operations.

You will have access to tools and frameworks that define containerization of platforms and deliver a true infrastructure service. Trianz can build docker containers for your platforms and create a deployment pipeline that will help automation of releases and upgrades across the infrastructure. Trianz also provides a managed services model to support and monitor infrastructure 24/7.

Why Trianz?

- Guiding *Fortune* 1000 organizations in their Cloud journey
- Frameworks & templates to assess & define migration plans
- Scalable hybrid reference architectures & governance processes
- Experienced & certified team of consultants & engineers
- Cloud labs for continuous assessment & process improvements

What We Do:

Enable Digital Transformations through Effective Strategies & Excellence in Execution

Our Partnerships

“Our Client sponsors rank us among the top partners for Business Impact, Execution Predictability & Client Commitment”.

About Trianz

Trianz enables digital transformations through effective strategies and excellence in execution. Collaborating with business and technology leaders, we help formulate and execute operational strategies to achieve intended business outcomes by bringing the best of consulting, technology experiences and execution models. Powered by knowledge, research, and perspectives, we serve *Fortune* 1000 and emerging organizations across industries and geographies to transform their business ecosystems and achieve superior performance by leveraging Cloud, Digital, Analytics and Security paradigms. As a professional services firm, our values and culture are focused on delivering measurable business impact, predictability in execution, and a unique partnership experience.
